

In the Claims:

Please note that the claims have not been amended:

We claim:

1. (Original) A method for scheduling an event over a network in a calendar of an invitee, the event having a set of details provided by an event creator, the method comprising:
  - creating a schedule request including at least the set of details and an identifier for the event creator;
  - sending the schedule request to a server in communication with the network, the server having access to the calendar of the invitee and a calendar for the event creator;
  - creating an event record at the server, the event record including at least the set of details and a link to the calendar of the invitee; and
  - adding the event to the invitee's calendar.
2. (Original) A method according to claim 1, further including:
  - creating a link from the event record to the event creator's calendar; and
  - adding the event to the event creator's calendar.
3. (Original) A method according to claim 1, wherein the network is the Internet.
4. (Original) A method according to claim 2, wherein the invitee's calendar, the event creator's calendar and the event record are stored in a database in communication with the server.
5. (Original) A method according to claim 1, wherein the schedule request is

a hypertext transfer protocol request.

6. (Original) A method according to claim 1, wherein the invitee's calendar is part of a personal information management system.

7. (Original) A method according to claim 1, wherein the event creator changes at least one member of the set of details for the event, the method further including:

- updating the event record with the changed set of details; and
- updating the event in the invitee's calendar with the changed set of details using the link between the event record and the invitee's calendar.

8. (Original) A method according to claim 7, further including sending a notification message to the invitee including the changed set of details.

9. (Original) A method according to claim 1, wherein the schedule request is created using a link associated with the event.

10. (Original) A system for scheduling an event over a network in a calendar of an invitee, the event having a set of details provided by an event creator, the system comprising:

- a first link, inserted in a content site associated with the event creator and including the event, that when selected creates a schedule request including at least the set of details for the event and an identifier for the event creator, the schedule request directing the event to the invitee's calendar;

- a least one server, in communication with the network, to receive the schedule request and store the event in the invitee's calendar and in an event record that includes a second link to the invitee's calendar; and

- at least one database, in communication with the server, to store the event

record.

11. (Original) A system according to claim 10, wherein the schedule request is a hypertext transfer protocol request.

12. (Original) A system according to claim 10, wherein the event is stored in a calendar for the event creator.

13. (Original) A system according to claim 10, wherein the content site is a Web page on the World Wide Web.

14. (Original) A computer program product for use on a computer system for scheduling an event over a network in a calendar of an invitee, the event having a set of details provided by an event creator, the computer program product comprising a computer useable medium having computer readable code thereon, the computer readable program code including:

program code for creating a schedule request including at least the set of details and an identifier for the event creator;

program code for sending the schedule request to a server in communication with the network, the server having access to the calendar of the invitee and a calendar for the event creator;

program code for creating an event record at the server, the event record including at least the set of details and a link to the calendar of the invitee; and

program code for adding the event to the invitee's calendar.

15. (Original) A computer program product according to claim 14, wherein the schedule request is a hypertext transfer protocol request.

16. (Original) A computer program product according to claim 14, further

including:

program code for creating a link from the event record to the event creator's calendar; and

program code for adding the event to the event creator's calendar.

17. (Original) A computer program product according to claim 14, wherein the event creator changes at least one member of the set of details, the computer program product further including:

program code for updating the event record with the changed set of details; and

program code for updating the event in the invitee's calendar with the changed set of details using the link between the event record and the invitee's calendar

18. (Original) A computer program product according to claim 17, further including program code for sending a notification message to the invitee including the changed set of details.
